

AQUAPPROACH ELITE

Chlorine Dioxide Generator

System Specs:

Pipe size: 1.5" or 2"

Max flow: 300 GPM

lbs/day ClO₂: 7.9 lbs

Max pressure: 145 psi

Power: 115vac

The AQUAPPROACH ELITE ClO₂ system generates and injects chlorine dioxide solution into the pipe line for water disinfection. Chlorine dioxide is produced using the acid + chlorite method. ClO₂ is generated in a submerged reaction column. The injection rate of chlorine dioxide is proportional to the water flow.

System Features:

- Ultrasonic clamp on flow meter
- Solenoid diaphragm pump with PVDF pump head, PTFE diaphragm, stroke length adjustment
- Submerged reaction chamber
- Plug and play design
- PVDF injection valves
- Sealed system with no odors
- Multiply & divide modes plus others
- Standby input
- Relay output
- Incremental adjustments
