

Every Farm Is Different.

Your water should be
treated that way.

Whether you're evaluating
water treatment for the first
time...

Replacing an aging medicator
or dosing setup...

Or trying to solve an ongoing
water quality issue in your
houses...

Aquapproach can help

We start by understanding your water.
Then we design a treatment program
specifically for your operation.

No one-size-fits-all systems.
No guesswork.

Just practical solutions backed by
people who know poultry.

**The Cost of Poor
Water Quality Isn't
Always Obvious.**

Until you measure it.

Let's evaluate your water and help
you understand what's really
happening between your well and
your birds.

What Is Your Water Really Costing You?

A Guide to Better Poultry Water Management

The most important nutrient on your farm
may be the one receiving the least attention.

Water Is the Most Consumed Nutrient on Your Farm.

Your birds consume more water than feed.
Every pound of gain begins with water.

Most farms carefully manage...

- feed and feed line height
- ventilation and house temperature
- bird weights and flock performance

...while giving very little attention to the quality of the water their birds drink every day.

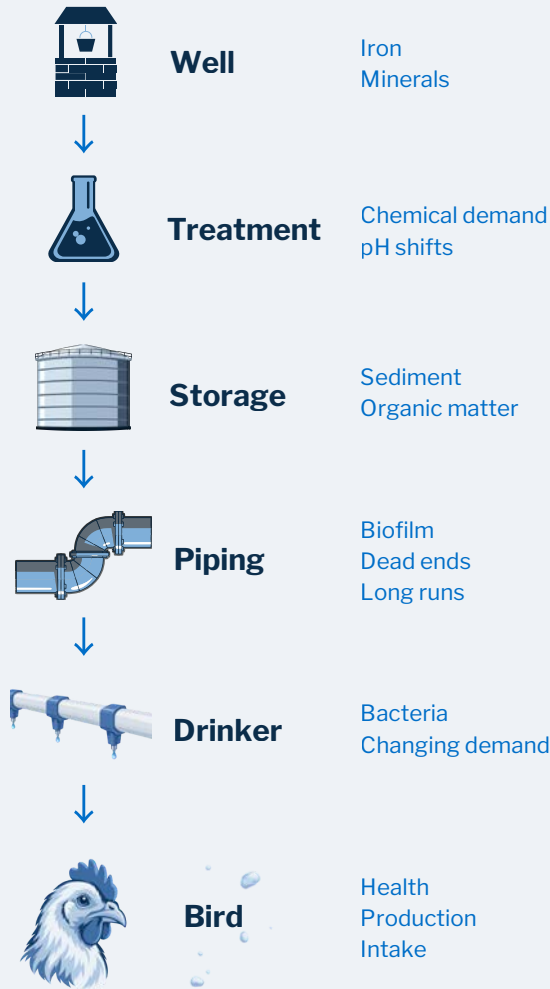

Doesn't your water system deserve the same level of management?

Five Questions Every Grower Should Ask

1. Do you know the sanitizer residual at the end of your drinker lines?
2. Have your water lines ever been cleaned internally?
3. Could biofilm be reducing the effectiveness of your sanitizer?
4. Is the last nipple getting the same water quality as the first?
5. How often is your water actually tested?

Water Changes Between the Well and the Bird.

Every step introduces variables.
Every variable affects your flock.

We Help Growers Take Control of Their Water.

Aquapproach provides complete water treatment programs designed specifically for poultry operations.

Equipment • Chemistry • Monitoring
Testing • Support • Training

Imagine Knowing...

Imagine knowing your sanitizer levels before arriving at the farm.

Imagine receiving an alert before treatment stops.

Imagine reducing manual testing.

Imagine seeing trends before they become problems.

Imagine having one company responsible for your entire program.

Because successful water treatment isn't about installing equipment.

It's about consistently delivering clean water to every bird.
